ASBESTOS SERVICES

Our staff are highly trained, motivated and qualified with extensive experience in the industry, providing our customers with innovative Total Quality Assurance solutions.

Safety Management

Under the new Worksafe regulations, Workplace PCBUs must have prepared or reviewed asbestos management plans.

Intertek act as trusted advisors for our clients, who are fully supported by our Worksafe Licensed Asbestos Assessors.

Whether you have a significant or minor asbestos issue, no job is too big or too small, for the intertek team.

Once ACM has been identified, the decision toward the next step can often be a daunting one, even for the experienced project manager.

Intertek offers advice and consultation on best value approaches to asbestos removal and remediation, including analysis of the ongoing costs of management, the viability of encapsulation and other management options, and the long-term benefits of removal.

Following the removal of asbestos, and prior to re-occupation, Worksafe NZ guidelines require a satisfactory independent visual inspection and clearance air monitoring by one of our Worksafe Licensed Asbestos Assessors.

Asbestos Services

Intertek are able to perform the full range of asbestos consultation and air monitoring services including Four Stage Clearance certification.

Intertek have been involved with the asbestos industry for over ten years. With an IANZ accredited laboratory in Northland we are able to offer a full range of asbestos services.

Training courses are available in:

- Asbestos Awareness
- Working with Non-Licensed Asbestos Products
- Health & Safety.

Intertek is IANZ accredited to ISO17025, with our current scope of accreditation including:

- Asbestos Fibre Counting
- Asbestos Air Sampling
- Asbestos Fibre Identification

We participate in a recognised Australasian quality assurance scheme and our robust quality system includes audits that are carried out on a regular basis to continually assess competency and ensure continual improvement.

Based in Ruakaka, adjacent to State Highway 1, our geographical location enables us to offer full coverage to the whole of the North Island.

Asbestos Awareness Training

At Intertek we provide an asbestos awareness training programme. The programme is intended for those persons who are liable to come in contact with or disturb asbestos in day to day activities. The asbestos awareness programme is also aimed at those who influence how work is carried out, such as maintenance workers, electricians, plumbers etc. Asbestos can be deadly, so asbestos training is needed to avoid risk, protect yourself and carry out the task in a safe manner.

Our Asbestos Awareness Training programme can be tailored to the individual needs of your business and can be delivered at a time that suits you. We can even deliver the programme out of normal working hours or on the weekend should this be required.

Providing a range of environmental testing and consultancy services throughout New Zealand with precision, pace and passion

- Asbestos management, refurbishment and demolition surveys
- Airborne fibre monitoring
- Bulk sample analysis and identification
- Clearance certifications
- Asbestos awareness training
