

ENVIRONMENTAL, HEALTH & SAFETY

Indoor Environments

Environmental, Health & Safety (EHS) issues have become more prevalent in today's indoor environments. Building occupants have a heightened awareness of the health effects of poor indoor air quality, ineffective safety management, hazardous material exposure and impacts of environmental events.

Intertek's team of scientific and engineering experts have experience in chemicals and hazardous materials management, indoor air quality assessment, EHS program development, construction and post-audit site support in the built environment.

Our range of services includes:

- Indoor air quality assessments
- Hazardous material assessments, management and abatement plans
- Water and mould damage assessments and remediation plans
- Smoke and fire residue migration assessments and remediation plans
- Chemical contamination assessments and remediation support
- Spills response and remediation
- Management of facility audit findings
- Site safety and emergency management plans
- Peer review and 3rd party oversight

Hazardous Material Assessments and Remediation Support

Whether you want to reduce your EHS risk exposure, are responding to an occupant concern, or have experienced a sudden and unexpected occurrence like a fire, backup, or flood, Intertek's qualified experts work to guide owners, facilities and project management, as well as contractor teams through assessment and remediation initiatives. Our assessment and remediation

initiatives involve lead and asbestos, water and mould damage assessments, chemical contamination assessments and smoke migration and residue assessments.

Site EHS Management

If you have had an environmental audit of your building and require support to navigate the findings, or need EHS guidance on a construction site for your new building, Intertek's experts have the industry experience to provide you with assistance to keep your project and operations moving forward. We can support with compliance and ISO audit findings, facility audits involving water, energy, or emissions, hazardous waste and construction risk management, and site safety program development and monitoring.

Indoor Air Quality Investigations

Over 80% of our lives are spent indoors – whether at work, at home, in school, or in public spaces – thus, it is no surprise that our comfort and health is so influenced by the air quality within our built environment. Intertek can perform and support volatile organic compound (VOC) and formaldehyde assessments, post-remediation and abatement assessments for mould, asbestos, lead, or chemicals of concern, post-water loss assessments for biological contaminants including mould and bacteria, post-fire air quality assessments and more.

The Intertek Advantage

With Intertek's range of complimentary teams and services such as: industrial hygiene, industrial field technical inspection, testing and certification services, R&D and manufacturing, and asset integrity management, Intertek can address all of your Environmental, Health & Safety needs within our global team. Intertek can support EHS requirements through every stage of design, construction, decommissioning and management, and can support you through unexpected occurrences along the way.

Intertek is a leading Total Quality Assurance provider to industries worldwide. Our network of more than 1,000 laboratories and offices and over 42,000 people in more than 100 countries, delivers innovative and bespoke Assurance, Testing, Inspection and Certification solutions for our customers' operations and supply chains. Intertek Total Quality Assurance expertise, delivered consistently, with precision, pace and passion, enabling our customers to power ahead safely.
