Engineering-based Technical Assurance

Complex Global Supply Chains

Component & Equipment Manufacturers

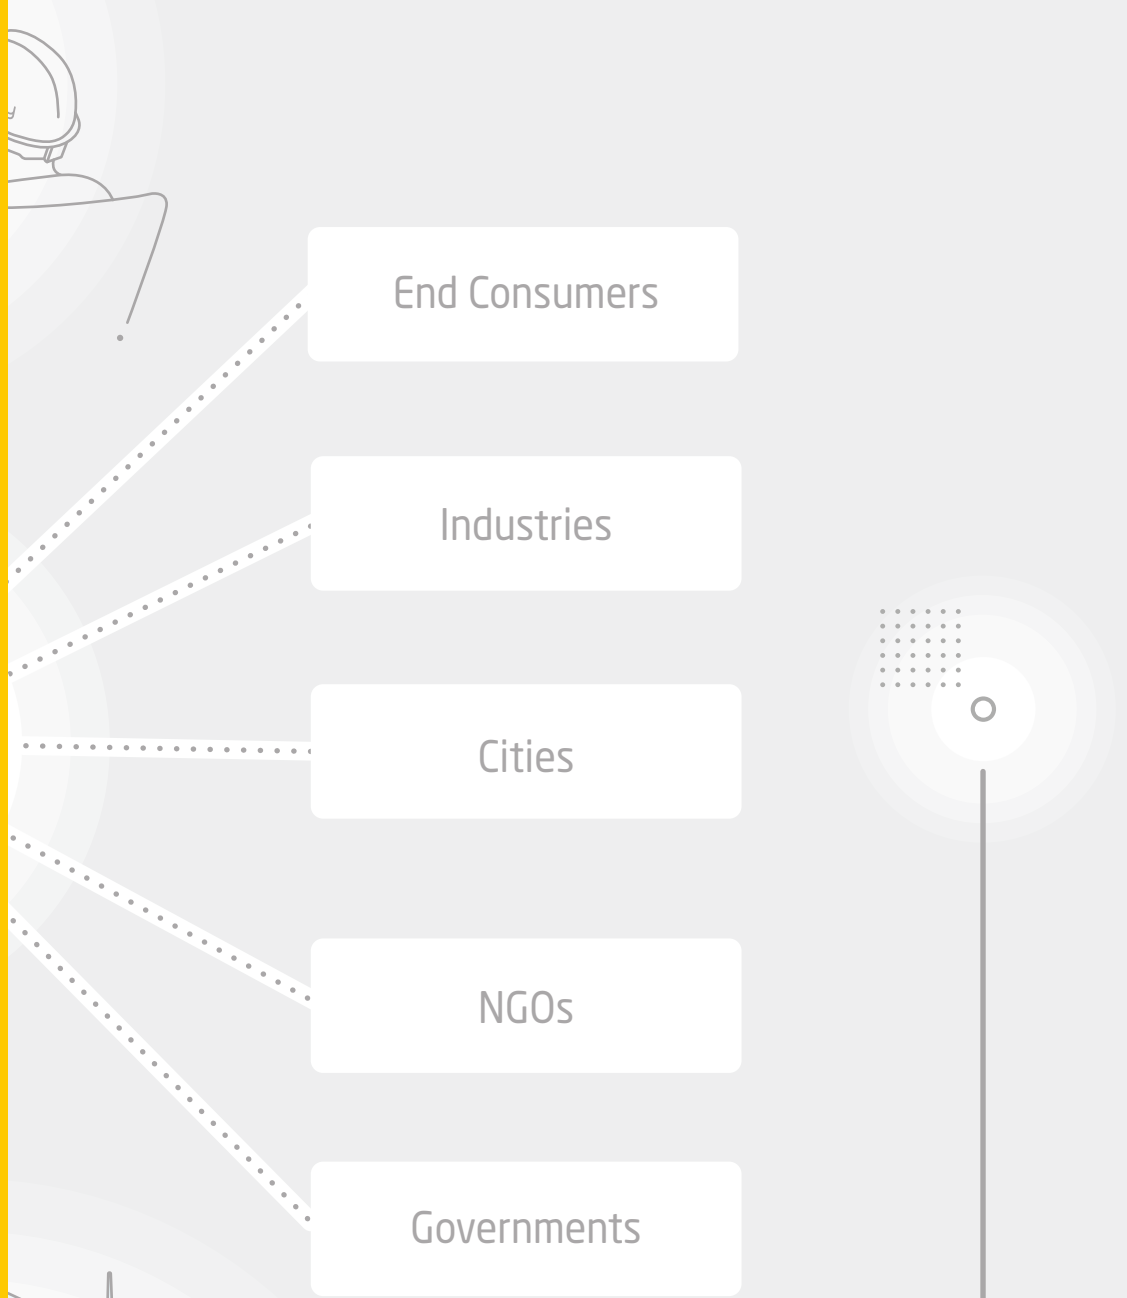

Critical Energy Assets

Energy Assets & Infrastructure

- Our global technical specialists cover every aspect of supply chain quality assurance to ensure equipment, materials and other assets comply with customer expectations and industry standards. Expert personnel, located in the world's major industrial centers review adherence to quality procedures, inspect items, witness tests, verify measurements, assess workmanship and report supplier progress.
- Equipment purchasing customers want supplier inspection programs to be more efficient and transparent. Using our risk-based data analytics to pin-point risky areas within their inspection program they can optimize their supply chain strategy by focusing on the higher impact quality and safety risks.
- Our unique pipeline quality verification solution offers pipeline owners and operators traceability and easy access to the inspection, testing and materials data needed to make informed decisions that ensure pipelines operate safely and efficiently.
- To help our global customers maintain supply chain and operational timelines, remote visual inspections enable quality control and quality assurance activities to continue thus maintaining manufacturing schedules without compromising safety and quality.

Energy Assets & Infrastructure

 On any major project, delays in delivery of materials, products or equipment to their final destination can be very expensive. Working with every link in the supply chain, we proactively take measures to ensure that deliveries are made on time and to specification, keeping our customers' projects running smoothly without costly delays.
