

SCIP DATABASE: A STEP BY STEP CHECKLIST

The following information provides a high-level checklist for companies placing products on the market that contain Substances of Very High Concern (SVHCs). As of 05 January 2021, products that contain SVHCs in a concentration greater than 0.1% (w/w) must be reported to the European Chemicals Agency (ECHA) via the SCIP Database. The legal basis for this requirement is the EU Waste Framework Directive (2008/98/EC).

To place products on the market that contain SVHCs, you must:

1. Determine if you are required to submit your articles to the SCIP Database (manufacturer, importer, distributor)
2. Group your articles according to the SCIP database requirements to reduce time and effort
3. Collect information about the articles (suppliers, datasheets, test reports, etc.)
4. Evaluate incoming information - identify which articles should be submitted to the SCIP Database
5. Create IUCLID dossiers
6. Submit dossiers to ECHA and generate SCIP numbers
7. Maintain data

The Intertek Advantage

Our team of experts have extensive experience in helping companies achieve regulatory compliance. We can help assess the risks based on your products and materials, and we will advise you on the compliance process and how to prepare your notification dossier and submit it. Our range of services include:

Process Gap Assessment - with a focus on REACH and SCIP

- Next steps: we will identify where the gaps are and advise you on what you need to do to be compliant

Supplier Management and Data Acquisition

- Obtain and evaluate supplier information
- Database solution for systematic data storage and data maintenance
- Identify the gaps, risks, and products that are to be checked analytically (if applicable)
- Provide regulatory supplier trainings in various languages

SCIP Database Support and Material Evaluation

- Create and submit SCIP reporting dossiers
- Conduct risk assessment to check whether new SVHC substances may impact your products

Contact us today to learn more about our supply chain chemical management solutions.
