

## FACT SHEET

# SUSTAINABILITY GAP ANALYSIS SOLUTIONS

**Intertek's industry leading experts can create bespoke Sustainability Gap Analysis solutions that are tailored to provide insights to improve customer's internal processes.**

### Helping customers bring Quality, Safety and Sustainability to life

Our clients trust us to ensure quality, safety and sustainability in their businesses, to protect their consumers and brands and to help them gain competitive advantage. Through our global network, local knowledge and subject-matter expertise, Intertek is ideally positioned to provide unique end-to-end assurance solutions.

As companies strive to demonstrate to stakeholders their end-to-end commitment to sustainability, this includes bespoke gap analysis services to understand through independent auditing how they are performing against their processes, in turn identifying opportunities for improvement.

### Sustainability Gap Analysis Solutions

Intertek experts are able to work with customers to identify which of your sustainability processes would benefit from a Gap Analysis audit. For example, if you have an internal supplier code of conduct, we can use that as a reference to independently check against.

Alternatively customers may have adopted an existing code, such as ETI base code or have minimum standards that suppliers are required to meet.

The level of insight provided by each Sustainability Gap Analysis helps support our customers in a crucial area, such as scrutinising supplier processes, to understand where there are areas that require or have opportunity to improve, to fulfil the customers commitments in this area – reducing risk to the business, its employees and broader stakeholders.

### Total Sustainability Assurance

Intertek's Total Sustainability Assurance programme, powered by our technical expertise and advanced software platforms, enables organisations to enhance their performance in driving sustainable practices throughout their operations and supply chain, globally and end-to-end, to independently and meaningfully verify their sustainability claims.

## Sustainability Gap Analysis solutions

Intertek's Sustainability Gap Analysis solutions apply to a broad range of customer requirements related to their business and supply chains:

- Modern Slavery policy and procedures
- Management systems for any CSR audit
- Supplier contractor onboarding processes including review of information from suppliers
- Supplier/Contractor assessments
- Health & Safety Risk assessments
- Anti bribery procedure and processes
- Employee/ Worker handbooks
- Company codes of conduct

Our Corporate Sustainability Certification is comprised of 10 comprehensive standards, aligned with the UN Sustainable Development Goals, that provide holistic quality, safety and sustainability assurance of operations, services and products, whilst fostering a culture of sustainability through awareness, training and engagement.

Intertek's wide range of operational sustainability solutions complement our Corporate Sustainability Certification and help you meet your operational goals and comply with governmental regulations.

We offer more than 130 sustainability services within 6 operational categories:

- Assets
- Environment
- Facilities
- Processes
- Products
- Systems

### Why partner with Intertek?

We can help organisations to meaningfully demonstrate commitment to sustainability and manage risk and resilience, ultimately supporting their ability to operate effectively, act responsibly and gain competitive advantage. Contact one of our experts today to discuss how we can help you ensure you are delivering on your sustainability commitments.
